PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience building scalable enterprise applications using React, Next.js, TypeScript, Node.js, Python, AWS, REST APIs, and GraphQL. Experienced in designing micro-frontend, microservice, multi-tenant, and event-driven systems, with a strong focus on security, non-functional requirements, automated testing, CI/CD, observability, and production reliability. Delivered modernization initiatives across banking, restaurant technology, and cruise-booking platforms, including a core banking migration, shared services supporting three restaurant brands, and independently deployable booking journeys. Passionate about high-quality code, architectural design, code reviews, performance optimization, and collaborating across engineering, product, and platform teams to deliver complex systems from planning through production.

TECHNICAL SKILLS

Backend & Architecture	Python, Fast API, Node.js, Express.js, REST APIs, GraphQL, Kafka, Microservices, Event-Driven Architecture, Backend-for-Frontend (BFF)
Cloud & DevOps	AWS, AWS Serverless Architecture, Docker, Kubernetes, Jenkins, CI/CD Pipelines, Git, Nginx
AI Engineering	OpenAI, Vercel AI SDK, LangChain, LangGraph, AI-Assisted Development Workflows
Frontend	React, Next.js, TypeScript, JavaScript, Redux, Tailwind CSS, Micro-Frontend Architecture
Quality & Observability	Jest, React Testing Library, New Relic, Core Web Vitals
Content Platforms	Adobe Experience Manager (AEM), Contentful CMS

PROFESSIONAL EXPERIENCE

Senior Experience Engineer

Feb 2025 — Present

Publicis Sapient

Remote · Full-time

- Architected a scalable **Next.js** cruise-booking platform for **Carnival** using **micro-frontend architecture** and **Atomic Design**, integrating **AEM** for dynamic content delivery across the end-to-end booking funnel.
- Delivered an **AI-powered booking assistant** as an independently deployed **micro-frontend** backed by a **Python FastAPI** service, answering itinerary, policy, and availability questions in context and deep-linking users into the existing booking flow.
- Designed a **hybrid intent layer** that combines deterministic rules with **LLM function calling** and grounds policy answers in AEM content through **retrieval-augmented generation**, sourcing all prices and availability from the platform's **GraphQL APIs** to eliminate generated inaccuracies.
- Architected scalable, **asynchronous FastAPI** services with **Redis caching**, **timeout and circuit-breaker policies**, and **rate limiting** to improve resilience under peak traffic while isolating chatbot failures from core cruise-booking operations.
- Built reusable **AI-enabled engineering workflows** that standardized how developers applied AI across the platform while preserving code quality, security, and architectural integrity.
- Owned **technical onboarding** for all new engineers, authoring structured learning paths on platform architecture, **TypeScript** conventions, and delivery workflows, reducing the time to first production commit.

Senior Software Engineer

May 2024 — Feb 2025

Inspire Brands

Hyderabad · Full-time

- Engineered **multi-tenant** fulfillment and location services powering **Buffalo Wild Wings, Sonic, and Arby's** for thousands of monthly active users from **one shared React and Next.js codebase**.
- Architected a **Node.js/Express.js BFF layer** that consolidated downstream API calls into tenant-specific responses, cutting client-side network overhead and eliminating sensitive fields from browser-exposed payloads.

Inspire Brands (continued)

- Led modernization of the fulfillment and location journeys, producing a **30% increase in user engagement time** and measurably higher customer satisfaction through faster page loads and optimized user flows.
- Integrated **Contentful CMS** for multi-brand content orchestration, enabling marketing to ship campaigns **without engineering deploys** and sharply reducing content lead time.
- Instrumented **New Relic and Google Analytics** across Core Web Vitals and conversion funnels, identifying and resolving performance regressions before they reached customers.

Analyst — Frontend Engineering

Nov 2022 — May 2024

DBS Bank

Hyderabad · Full-time

- Implemented **micro-frontend architecture** in React, modularizing a monolithic banking application into independently deployable units and unblocking **parallel development across teams**.
- Improved the **Lighthouse score by 25%** through code optimization, continuous performance monitoring, and efficient resource management, with components tuned for consistent cross-browser performance.
- Built **role-based navigation and conditional rendering** for admin, financial-analyst, customer-support, and end-user personas using React, Redux Toolkit, and Context API, keeping each experience secure and scoped to entitlements.
- Drove frontend modernization and framework upgrades, retiring critical **legacy technical debt** and establishing **modular coding patterns** adopted across the codebase.
- Automated deployment of frontend applications through **Jenkins and EVOLVE (cloud orchestration on AWS)**, with Jest and React Testing Library coverage gating releases.
- Applied **secure coding practices** to mitigate vulnerabilities and meet banking security and compliance policies, developing deep working knowledge of **fintech workflows** and regulated delivery.

Associate Software Engineer

Aug 2020 — Nov 2022

Accenture

Bengaluru · Full-time

- Developed the user interface for the **myWizard DevOps platform** in **React**, translating design specifications into production-quality responsive interfaces.
- Led design and development of a scalable **React component library adopted across 4 platform modules**, driving UI/UX standardization, removing duplicate implementations across engineering teams, and improving development velocity.
- Received the **Accenture Wall of Fame Award (2021)** for delivery impact on the DevOps platform within the first year of joining.

PROJECTS

AI-Powered Portfolio with RAG Chatbot | Next.js, Hybrid RAG

- Built a responsive, SEO-optimized portfolio using Next.js (App Router), React, and TypeScript with SSR/SSG for fast page loads and strong Core Web Vitals.
- Integrated a RAG-based conversational AI assistant using LangChain, vector embeddings, and semantic search that answers recruiter questions about professional experience, projects, and skills in real time.

EDUCATION

B.Tech, Electronics and Telecommunication Engineering

May 2020

KIIT University, Bhubaneswar
